

Problem-Solution fit canvas

Purpose / Vision: Ensure every Incident is complete, consistent and valid before it is saved, using ServiceNow UI Policies and Client Scripts. | Team ID: SWTID-2026-5148

Define CS, fit into CC	1. CUSTOMER SEGMENT(S) CS - Service desk agents / incident resolvers who log and triage Incidents - ITSM managers who own reports and SLAs - ServiceNow administrators who maintain the Incident form - Callers / end users who raise issues	6. CUSTOMER CONSTRAINTS CC - Time pressure while logging incidents - Must stay within native ServiceNow (no extra tools) - Needs admin access to configure rules - Validation must not slow down data entry	5. AVAILABLE SOLUTIONS AS - Manual checks / user awareness – inconsistent - Always-mandatory dictionary fields – not conditional - Server-side Business Rules / Data Policies – error appears only after submit - Training and guidelines – depend on memory	Explore AS, differentiate
	2. JOBS-TO-BE-DONE / PROBLEMS J&P - Make sure High-impact incidents have Assignment group and Assigned To - Keep Urgency consistent with Impact - Prevent incomplete or invalid records from being saved - Stop State changes made from the list view	9. PROBLEM ROOT CAUSE RC - The Incident form has no conditional field rules - Priority and assignment are entered manually - List-view edits bypass the form checks - Quality relies on user awareness alone	7. BEHAVIOUR BE - Agents fill the form quickly and may skip fields - Records are corrected later through rework - Managers question report accuracy and chase agents - Admins are asked to change form behaviour	
Focus on J&P, tap into BE, understand RC	Identify strong TR & EM	3. TRIGGERS TR - A High-impact incident is reported - SLA pressure on critical tickets - Poor report quality or audit remarks on missing data	10. YOUR SOLUTION SL - UI Policy "High Impact Control": Assignment group mandatory and Urgency read-only when Impact = High, reversed when false - onChange Client Script: auto-sets Urgency to High and shows a message - onSubmit Client Script: blocks save and shows an error if Assigned To is empty - onCellEdit Client Script: blocks State edits from the list view - Result: complete, consistent Incident data at the point of entry	Extract online & offline CH of BE
		4. EMOTIONS: BEFORE / AFTER EM - Before: stressed, rushed, worried about SLA breaches, frustrated by rework - After: confident, in control, trusting the data	8.1. ONLINE CH - ServiceNow Incident form and list - Service Portal / email used by callers to report issues 8.2. OFFLINE - Phone calls to the service desk - Verbal escalation to team leads
